

Table of Contents

Preface	v
Organizers & Committees	xi
SESSION I – Geometry	1
Differential Geometry of Position Vector Fields <i>Bang-Yen Chen</i>	3
Construction of Equilibria With Symmetry for Anisotropic Energy Functionals <i>Bennett Palmer</i>	21
A Note on Generalized Möbius-Listing Bodies <i>Johan Gielis, Ilia Tavkhelidze</i>	31
Geometric Figures Which Appear After VV Cutting in the Radial Cross Section of Generalized Möbius-Listing Bodies <i>Ilia Tavkhelidze</i>	41
Three-Valued Gödel Logic With Constants and Involution for Application to R- Functions <i>Revaz Grigolia</i>	47
SESSION II – Mathematics	53
Laplace Transform Approximation of Nested Functions Using Bell's Polynomials <i>Paolo Emilio Ricci, Diego Caratelli, Sandra Pinelas</i>	55
Stability of Solutions in Mixed Differential Equations <i>Sandra Pinelas</i>	71
A Note on Low Factorial Based Polynomials <i>Giuseppe Dattoli</i>	85
Umbral Calculus and New Trigonometries <i>Silvia Licciardi</i>	95

SESSION III – Superellipses and Superformula in Science, Biology and Technology	107
Advanced Particle Swarm Optimization Methods for Electromagnetics <i>Luciano Mescia, Pietro Bia, Johan Gielis, Diego Caratelli</i>	109
From Superellipses to Superformula and Technology <i>Bert Beirinckx</i>	123
The Shape of the Cross-Section and the Strength of the Long Bones <i>Luděk Spíchal</i>	143
Conquering Mount Improbable <i>Johan Gielis</i>	153
Author Index	175
